STOPPING BONE LOSS IN ITS TRACKS

- ✓ Most denture patients are not aware that tooth loss leads to bone loss.
- ✓ Implant therapy mitigates bone loss, preserving the patient's facial structures, chewing function and quality of life.
- ✓ When made aware of how bone loss, facial esthetics and dental function can worsen over time, most patients prefer implant treatment.
- ✓ The greater patient satisfaction and increased profitability provided by implant therapy can help your practice expand.
- ✓ The accompanying booklet, *Tooth Loss Leads to Bone Loss*, can help educate your patients on the benefits of implant treatment.

UPGRADING TO AN IMPLANT RESTORATION IS SIMPLE

- ✓ Because your patient was recently fitted for a denture, upgrading is simple – we've already got the digital prosthetic design on file.
- ✓ Use the accompanying Rx to have the entire cost of your patient's denture discounted when you upgrade your patient to a fixed implant restoration within a year.

LEARN TO PLACE IMPLANTS

Many GPs are expanding their practices by learning how to place implants. The Glidewell International Technology Center (www.glidewellcecenter.com) is just one of many training resources available to help GPs transition to dental implant placement.

LOCATOR OVERDENTURE

LOCATOR BAR OVERDENTURE

SCREW-RETAINED HYBRID DENTURE

BRUXZIR® FULL-ARCH IMPLANT PROSTHESIS

A Solution for Every Patient

There are various implant solutions available to suit the needs and finances of your edentulous patient population.

Removable Implant Solutions

Locator® Implant Overdentures are delivered over a minimum of two implants. They incorporate Locator attachments that improve stability and function by fastening to implant abutments.

The Locator Bar Overdenture distributes occlusal loads more evenly across four or more implants. Like the Locator Overdenture, the appliance can be removed by the patient for cleaning.

Fixed Implant Solutions

The Screw-Retained Hybrid Denture offers the maximum amount of prosthetic stability and function by permanently attaching to the implants through a titanium framework.

The BruxZir® Full-Arch Implant Prosthesis combines the optimal function of a hybrid denture with the exceptional durability of solid zirconia, making it ideal for enduring the functional stresses that dentures must withstand.

For more information on fixed and removable implant solutions, including step-by-step clinical protocols, visit www.glidewell dental.com.
