

“

We are so glad we chose to improve our smiles. It's hard to beat the new all-ceramic materials available today... They look and feel so natural!

”

ALL-CERAMIC CROWNS & BRIDGES

ALL-CERAMIC CROWNS & BRIDGES

Since the early 1970s, all-ceramic crowns, bridges and veneers have provided the superior cosmetic results patients desire. Because all-ceramic restorations contain no metal understructure, they are able to transmit color similar to adjacent teeth and tooth structure. This enables them to blend more completely with the surrounding natural teeth.

In addition to their natural-like appearance, these restorations have become stronger than ever. With product research and development, along with state-of-the-art cementation and bonding techniques, modern all-ceramic systems rival traditional restorations for their use in anterior bridgework. Ask your dentist if all-ceramics can be used for your treatment plan to provide you with the most natural-looking smile available today.
