

Mimic Nature *Perfectly*

Over the last two decades, remarkable progress has been made with monolithic restorative materials. But, for dentists and patients who desire deep realism, monolithics have left them wanting. Fusion with BruxZir™ Zirconia is designed to mimic nature perfectly. Its two layers benefit from the latest innovations, with modern materials used to emulate the appearance and structure of dentin and enamel. Together, they form the most lifelike restoration ever produced by Glidewell.

For Those Who Love *Natural* Beauty

- Two zirconias bonded to emulate the dentin-enamel relationship
- Anatomically shaped core establishes strength, color and depth
- Wraparound veneer lets light pass through incisal and interproximal surfaces

FUSION™

— with BruxZir

A Revolutionary Fusion of Engineering and *Artistry*

Fusion with BruxZir™ Zirconia is a bilayer restoration where zirconia is bonded to zirconia.

Each Fusion restoration's inner core is shaped with mamelons and internal anatomy, while the wraparound veneer allows light to shine through the facial, incisal and interproximal surfaces. Together, these features create an appearance that's virtually indistinguishable from nature.
